Minimailer 4 Plus

Stack 'n' Go™

The Minimailer 4 Plus Range

Based on our ground breaking Minimailer Range, PFE International is proud to introduce the new Minimailer 4 Plus. Never has a desktop folding and inserting system been more advanced, bringing a new level of automation with its unique *Stack 'n' Go* feature. Capable of processing a wide variety of applications quickly and efficiently, the small and stylish system offers total flexibility with its two, three and four station options.

Stack 'n' Go

Two Station

From fully automatic *Stack 'n' Go* to full programmability, the two station system is packed with advanced features. Single documents, such as letters, invoices and mailshots, can be folded, inserted and sealed in a wide range of envelopes. An additional insert can also be nested automatically from the second insert station. Using PFE's advanced double document detection system, the integrity of every filled envelope is assured. There is also a fold-only option, when enveloping is not required. As with the 3 and 4 station, simplicity is the key and the user friendly operator interface ensures ease of use and optimum mailing efficiency.

Three Station

As with the two station model, the three station system makes light work of a huge range of outgoing mail - from invoices and statements to cheques and mailshots.

Fitted with two automatic sheet feed stations and an automatic insert feeder the system is capable of cascading between the two sheet feed stations, collating long and short forms and nesting into them a wide variety of inserts. Simply select a job, load your stationery and press 'Start' Then let the Minimailer take care of the rest, producing over 3,000 letters per hour.
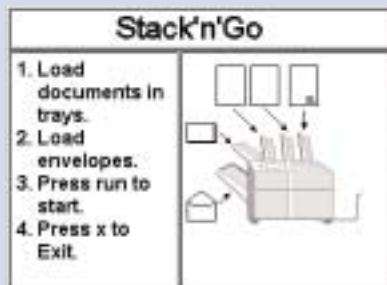

Four Station

Top of the range is the four station model, which offers total automation in a compact desk-top system. The addition of the fourth station gives increased versatility, allowing three collated documents and a nested item to be inserted in the envelope.

Whether you need the full intelligence of OMR or the simplicity of hand feed, from simple documents to complex multi-part mailings, the Minimailer four station system makes anything possible, regardless of format.
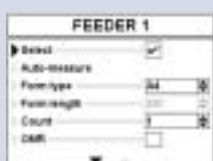

Stack 'n' Go

Features

Stack'n'Go

1. Load documents in trays.
2. Load envelopes.
3. Press run to start.
4. Press x to Exit.

The Minimailer 4 Plus range is the first PFE product to feature this highly innovative concept. It allows the operator to simply stack any documents of varying sizes plus any insert into the machine, hit the start button and the machine will process into your envelope automatically. There is absolutely no set-up required! The machine has now memorised your job and has fully calibrated itself ready to process your job with the minimum of fuss, saving you time and money.

Job Programming
The system allows for up to 20 job programmes to be held on its memory. The extremely sharp and simple to use operator interface guides you through the system in order to speedily operate the machine. It's child's play!

- Machine can't run

Help
An intelligent and comprehensive help feature will speedily enable the operator to overcome any obstacle.

Flexibility
Your Minimailer 4 Plus can be specified with 2, 3 or 4 stations. Each system is available with OMR or can be upgraded to read OMR at a later date.

Short Form
All feed stations now have the ability to run not only standard forms that require folding, but shorter forms that do not. Form sizes can be varied across all sheet feed stations.

Hand Feed
The 'Daily Post' function enables the machine to handle stapled sets of documents either on their own, or with automatically fed items.

Easy Access
In case of a mis-feed, the clam shell design allows you to gain unrivalled access to the entire paper path. The operator interface will even tell you where to look. The document can then be cleared and the machine re-started immediately.

Automeasure
During the full programming operation, Automeasure allows the user to automatically measure form lengths. This is achieved by simply passing the document through the machine via station one.

Cutting The Costs Of Document Delivery

A significant enhancement to the overall process is the simple addition of OMR or barcode marks to a document. This allows a mailing system to provide complete double document security, the capability to target selected customer groups by selective feeding and to group multiple pages or multiple invoices to the same customer. Our solutions are developed to integrate easily within any business environment and are designed for ease of use.

PFE software solutions focus on improving the efficiency and effectiveness of the document delivery process by enhancing document presentation, providing alternative distribution options such as, fax, e-mail, archive, and fully utilising the functionality of printing and mailing systems.

Find out how our solutions can help you to cut the cost and improve the effectiveness of your document delivery process.

*in*doc.s
Intelligent Document Delivery Solutions

PFE supplies a range of high quality consumables, including a range of envelopes, featuring all the commonly used sizes and formats including DL+ and C5, white and manilla paper, standard and vertical windows. In addition, we can offer an overprinting service.

As part of our service, we can also supply PFE Envelope Sealing Fluid, Roller Cleaner and Invertible Air Dusters.

Please call our Consumables Sales Division on: 020 8502 8418, fax us on: 020 8502 8442 or visit our website.

Technical Specifications

Two Station

- *Stack 'n' Go*
- Two automatic feed stations with 250 sheet capacity
- 'Daily Post' function for hand feed items
- Handles paper from 60 - 110 gsm
- Inserts booklets up to 1 mm thick
- Fully automatic fold and envelope settings
- 20 User programmable job memories
- Cycles at 3,000 envelopes per hour
- Advanced operator interface
- Advanced double document calibration
- High Capacity desk-top envelope catcher tray
- Optional OMR capability

Three Station

All features of the two station but including:
- 3 automatic feed stations with 250 sheet capacity
- 2 station cascade
- Wider range of document combinations

Four Station

All features of the two and three station but including:
- 4 automatic feed stations with 250 sheet capacity
- 3 station cascade
- Widest possible range of document combinations including complex multi-part mailing

OPTIONS
- On-line Franker link
- PFE OMR system capability with Grouping, Select Feed, Out-sort and Forms Security functions.
